RAEX IOT and Op Data

On 1st February 2014, the current RAEX format for AA.14 documents will be replaced with a new format which will become mandatory for all mobile network operators.

RAEX IOT and Op Data

In 2008, the GSM Association introduced an electronic document format for operators' AA.14 documents called RAEX AA.14 (Roaming Agreement Exchange). That format is now being replaced with 2 distinct document formats:

- RAEX IOT, which contains all Inter-Operator Tariff details;
- RAEX Operational Data, which contains non-tariff information such as contact details and supported services.

The GSMA InfoCentre 2 website provides an application which allows operators to create these documents and to exchange them with their roaming partners. Alternatively, operators may delegate this task to a RAEX agent, such as EDCH.

EDCH offers a convenient and time-saving option whereby an operator can provide EDCH with access to the InfoCentre 2 RAEX application, allowing EDCH to create, maintain and distribute the operator's RAEX documents, to their roaming partners.

Implementation

To avail of this service, operators should **contact EDCH Account Manager** to make arrangements for implementation.

Support

EDCH has a support team of dedicated and highly-qualified professionals that is ready to assist you on any concerns regarding RAEX IOT and Op Data.

Related Services

RAEX IR.21: EDCH offers a fully outsourced solution whereby EDCH will provide both XML and PDF versions of operators' IR.21 documents, for uploading to the GSMA InfoCentre. Whenever the document needs to be updated, the client can simply inform EDCH of the necessary changes and EDCH will provide the updated IR.21 documents.

SIM Watch: SIM Watch is an inventory management and usage monitoring application for test SIM cards.

IOT Check: Inter-Operator Tariff Check is a facility that ensures that TAP records are charged according to the correct and updated IOT rate.

Conclusion

EDCH's RAEX IOT and Op Data solution relieves operators from the administrative burden of both maintaining and distributing their IOT and operator details to their roaming partners.
