## RAEX IR.21

On the 1st of April 2011, the RAEX format for GSM operators' IR.21 documents was launched and the documents can be shared with roaming partners via the GSMA InfoCentre.

Furthermore, any non-RAEX IR.21 documents/ information which are currently stored in the GSMA InfoCentre were considered obsolete and removed on 1st July 2011.

To facilitate this transition, EDCH offers a fully outsourced solution whereby EDCH will provide both XML and PDF versions of operators' IR.21 documents, for uploading to the GSMA InfoCentre. Whenever the document needs to be updated, the client can simply inform EDCH of the necessary changes and EDCH will provide the updated RAEX documents.

### RAEX IR.21

Whilst the GSMA InfoCentre offers the facility for operators to enter their IR.21 details and generate the document in RAEX format, operators can save time by outsourcing the entire data entry process to EDCH. The operator can then upload the RAEX IR.21 to the GSMA InfoCentre where it will be available to other operators.

EDCH can complete the entire process of generating a full RAEX IR.21 document within one to four days. Upon completion, EDCH will provide the RAEX XML and PDF versions of the client's IR.21 document.

EDCH currently supports RAEX IR.21 version 9.2.

### Implementation

The client needs to provide EDCH with their IR.21 document (in Microsoft Word or PDF format).

### Client Support

EDCH has been offering RAEX services since 2008, managed by highly dedicated employees specialized in supporting RAEX IR.21.

### Related Services

RAEX AA.14 – EDCH can also convert an operator's AA.14 document to RAEX XML and PDF formats.

### Conclusion

EDCH has years of experience in generating and validating RAEX XML documents, which can be a time-consuming and difficult process for those who are not familiar with it.

Using our solution, within a matter of days EDCH can provide you with a RAEX-compliant IR.21 document which can be updated at any time, upon your request.

By outsourcing RAEX IR.21 management to EDCH, operators can reduce their administrative workload and focus their resources on the core of their roaming business.
